

Why Do You Need MammoVest?

POSITIONING IS A SKILL!

The undefined anatomical borders and soft squishy tissue make positioning during compression very difficult! MammoVest is an approachable and stress-free way to hone skills.

BREASTS ARE PERSONAL

Breasts are a very sensitive part of the body and finding volunteers for training isn't always possible. Compression is uncomfortable and the breasts can be awkward to handle. With MammoVest there will always be a willing practice patient.

THE ABSENCE OF TRAINING TOOLS

Other modalities in radiology have training manikins and phantoms – why not mammography? Realistic breast models are hard to find – until now!

CONTINUED EDUCATION

Even seasoned technologists can use refreshers on positioning to enhance tissue capture, optimize work flow and to adopt techniques that are less strenuous and physically demanding. Anyone can fall into old habits and skip steps.

RAPID ONBOARDING

It's no secret that there is a shortage of Mammography Technologists. MammoVest provides help with onboarding new technologists who may be new to mammography or new to the machines in your clinic.
